

ABSTRACT

An automated banking machine includes a mechanism for accepting deposited items.

Deposited items may be provided to the machine in envelopes which are first passed to a user from
5 an envelope storage area (132) in the machine through a transport (124) and which are presented to
the user through an opening (244). An envelope storage and dispensing device (134) is operative to
assure that only a single envelope is delivered to the user. A user may thereafter include deposit
items in the dispensed envelope. The deposited items are passed through the opening (244) and are
deposited in a deposit-holding container (128). The deposited items may be marked with indicia
10 corresponding to the transaction or properties of the deposited item where the envelope originally
dispensed to the user for holding the deposited item.
